INTRODUCTION

Ante 10 annus li secretario del Occidental-Academie, Sr Ilmari Federn de London, hat comensat composir un rudimentari lexico del rimes in Occidental. Ti unesim listes manuscrit instigat nos reprender ti ovre, developante it considerabilmen til constituer un lexico atendet desde long témpore. Noi expresse ci a Sr Federn nor gratitá por su unesim tentative quel ,benque ne continuat, servit nos quam exemple a sequer.

Por esser complet e sin reprocha li present ovre vell har postulat ancor pluri annus e mult colaboratores. Noi tamen publica it ja nu pro que it es urgentmen indispensabil por li standardisation del lingue international, specialmen por li labores de I.S.O. (International Standards Organisation) e de I.A. L.A. (International Auxiliary Language Association).

Li poetes va forsan regretar que in alcun casus nor classification ne sempre egarda li sillabe accentuat, ma noi fa remarcar que li present lexico es anc destinat al grammaticos a queles it es util haver listes de finales mem abstractante li accentu tonic.

Tal qual it es, ti ovre, noi crede, va esser consultat con fructe de omni usatores del lingue international. Poc a poc, per li practica, on va posser completar it. Just pro ti eventualità noi lassat suficent spacie in li fine de chascun linea, por posser adjunter nov o obliuiat paroles.

Conform al disposition usual del lexicos national de rimes noi adoptet por ti-ci li division in 5 cardinal partes secun li vocales del ante-ultim sillabe, poy in chascun parte li alfabetic ordine por li sequent consonantes.

On ne deve obliuiar que li presente e li passate del verbes posse anc constituer finales, mem si li lexico indica solmen li infinitives. Por exemple, con megera, bayadera rima anc li present del verbes finient per -erar: yo libera. Con delicat, autocrat, grat, etc., rima omni passates del verbes per -ar, etc. On vide dunc que por li poetes li possibilità de rimation es mult plu grand quam li númere del paroles citat sembla indicar it. Li nécessitá indicar to brevimen ductet nos combinar li du finales -a, -ar; -e, -er; -i, -ir, etc., in un unic liste. .

Li finales constituet per un sufixe es precedet de un tiré (Ex. -al) por distinter les del finales ne derivat.
